

First Test Conducted 2-25-2012, Sheridan Texas, Price Gregory Pipeline, (RUMBER)

One 40ft joint of 42in, .900 wall thickness, approximately 50,000 lbs. was used as the test pipe.

Saddle Crotch

Offside skid set

No contact, weight of the pipe caused the Rumber to bend

Flex in board

Notes: Besides the flex in the board, Rumber preformed great. All people interviewed requested that all four sides have an abrasive surface. The new dimensions need to be true 3.5 x 5.5 inches. The durability and weight was very impressive to the client. If the plastic/rubber could be adjusted and have some kind of hardener added to the mixture, it might have less elasticity. The Rumber has potential for other products that they are very interested in as well. Any thoughts would be appreciated.
